Practices: OOP, TDD, Accessibility, Responsive Design, Agile Practices, Rebase & Merge workflows

Projects

JobFinder (Six-member team project) [GitHub Repo](#) || [Deployed Site](#)

This application allows a new user to create a profile and login. Users can search and filter jobs based on city and position. They have the ability to save jobs and go to a user profile, view additional details about each saved job and link to the application.

Tech Stack: JavaScript, TypeScript, React, React-Router, HTML, CSS, Context API, Travis CI, Cypress

Rancid Tomatillos (Paired project) [GitHub Repo](#) || [Deployed Site](#)

The application allows a user to view a list of movies, search and filter by title. Then find more information about each movie including a trailer.

Tech Stack: JavaScript, React, React-Router, HTML, CSS, Cypress, Heroku

Overlook Inn (Solo project) [GitHub Repo](#)

Hotel booking application that allows for users to filter and book rooms. With viewing of past and present booking information with total user spend.

Tech Stack: JavaScript, Mocha/Chai, HTML, CSS/Sass
